

VERSION 1.0

Industrial Systems

Master Data (APM + S4 HANA Asset Management)

Surabhi, Sanket and Roseline

“People don’t buy what you do, they buy why you do it”

Maintenance (Industrial generators)

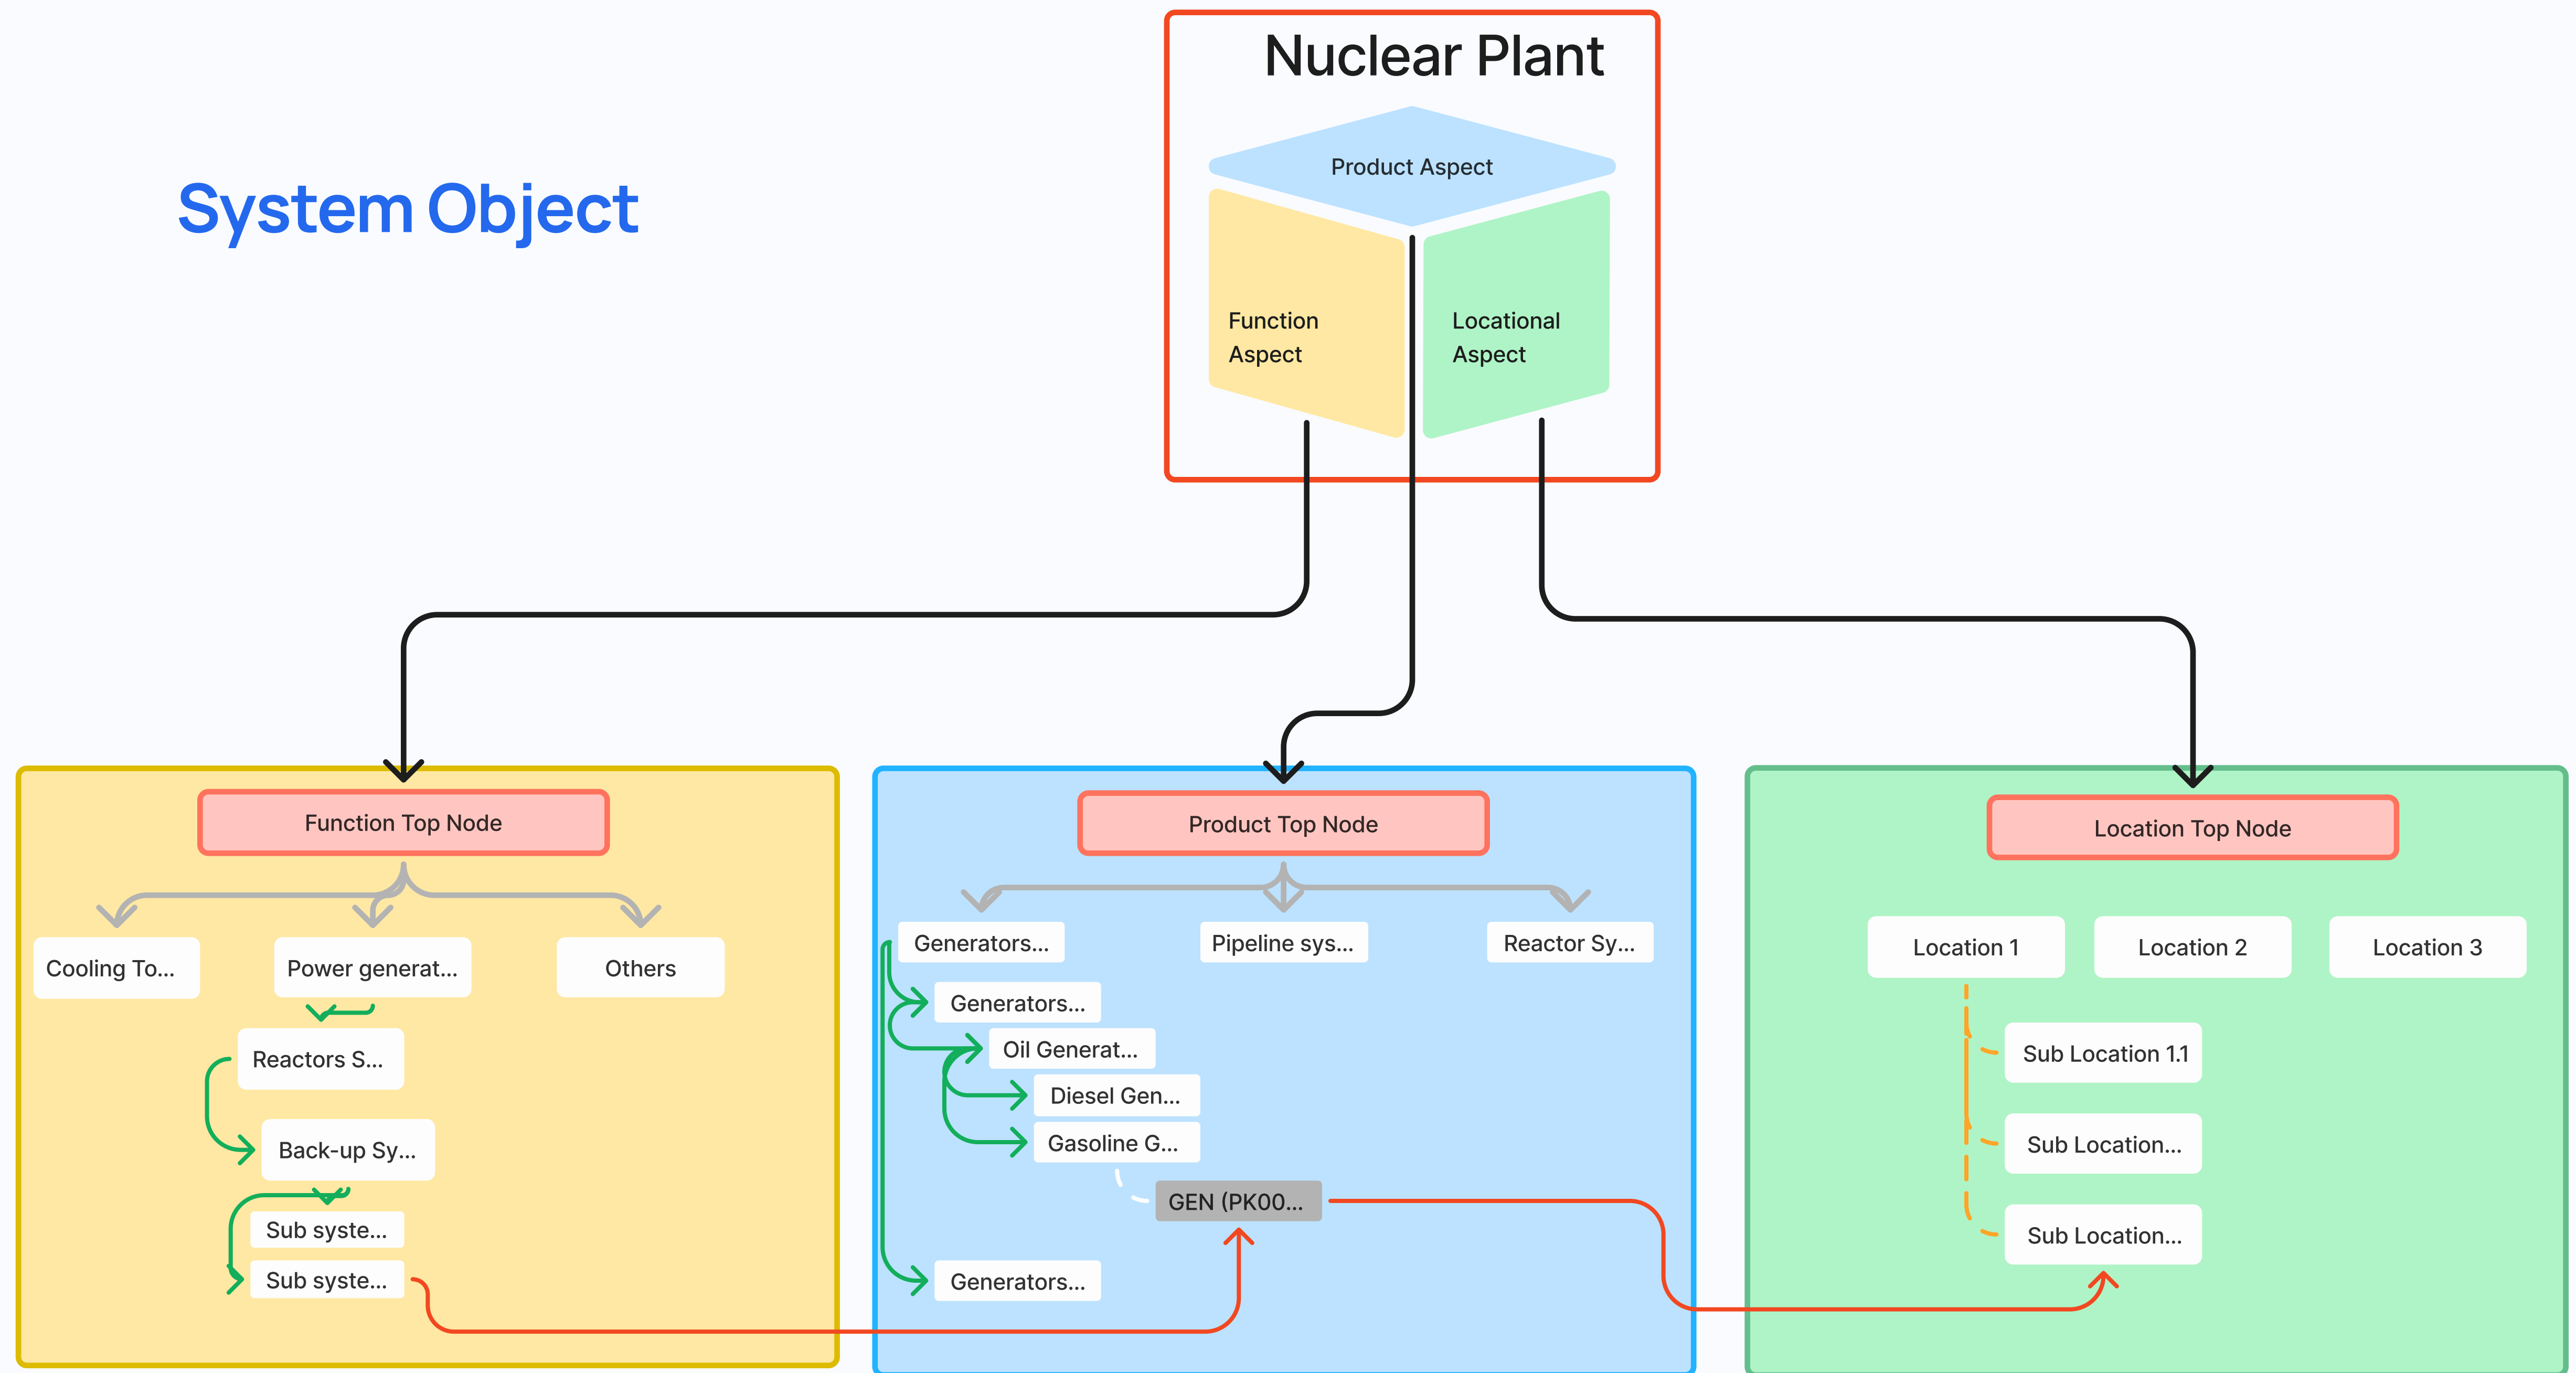

The Bigger Picture

The Bigger Picture

System Object

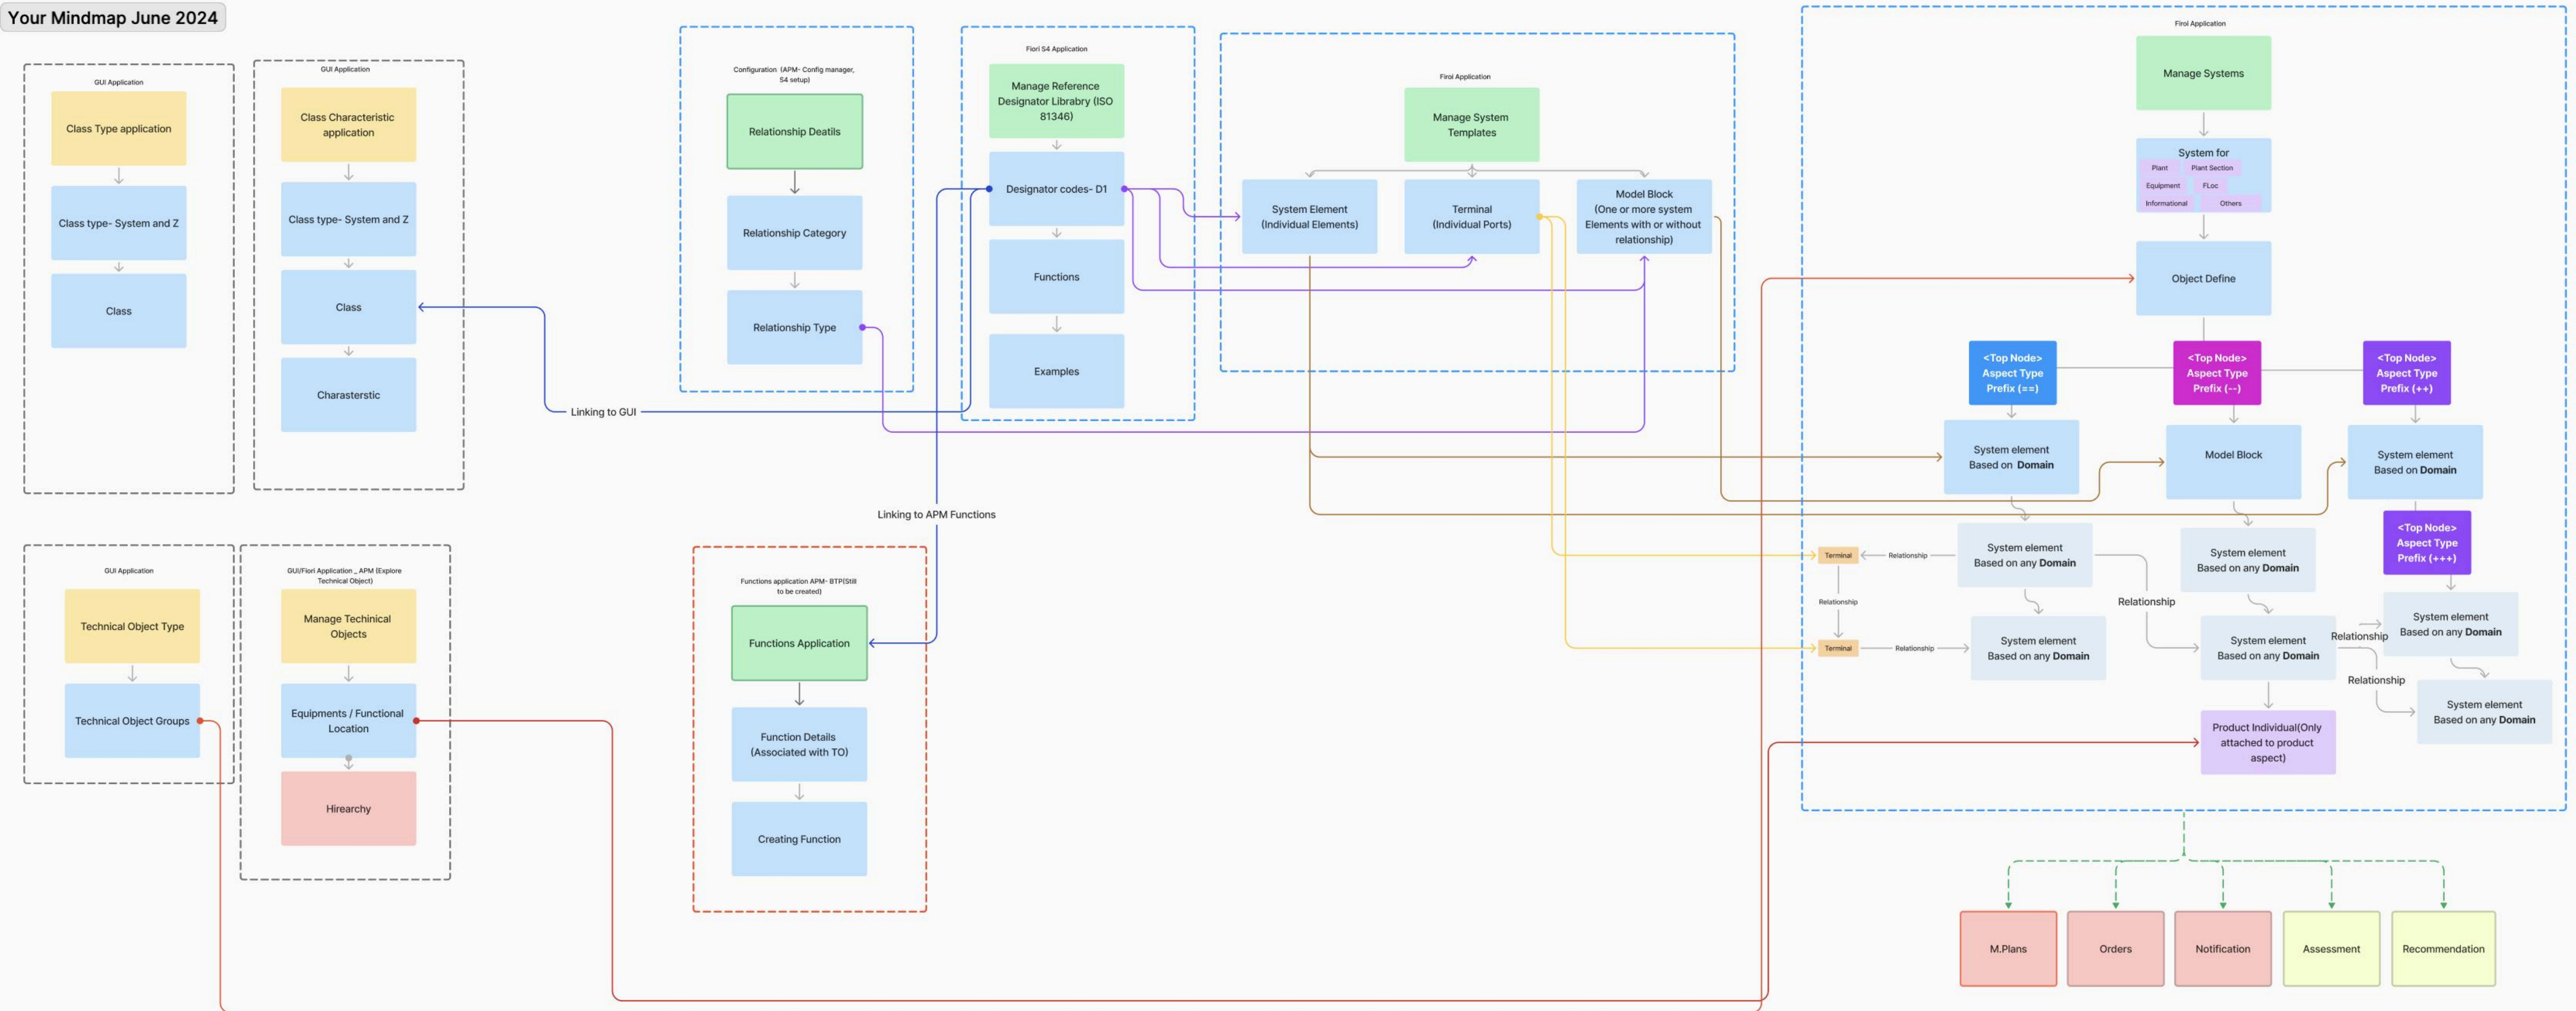

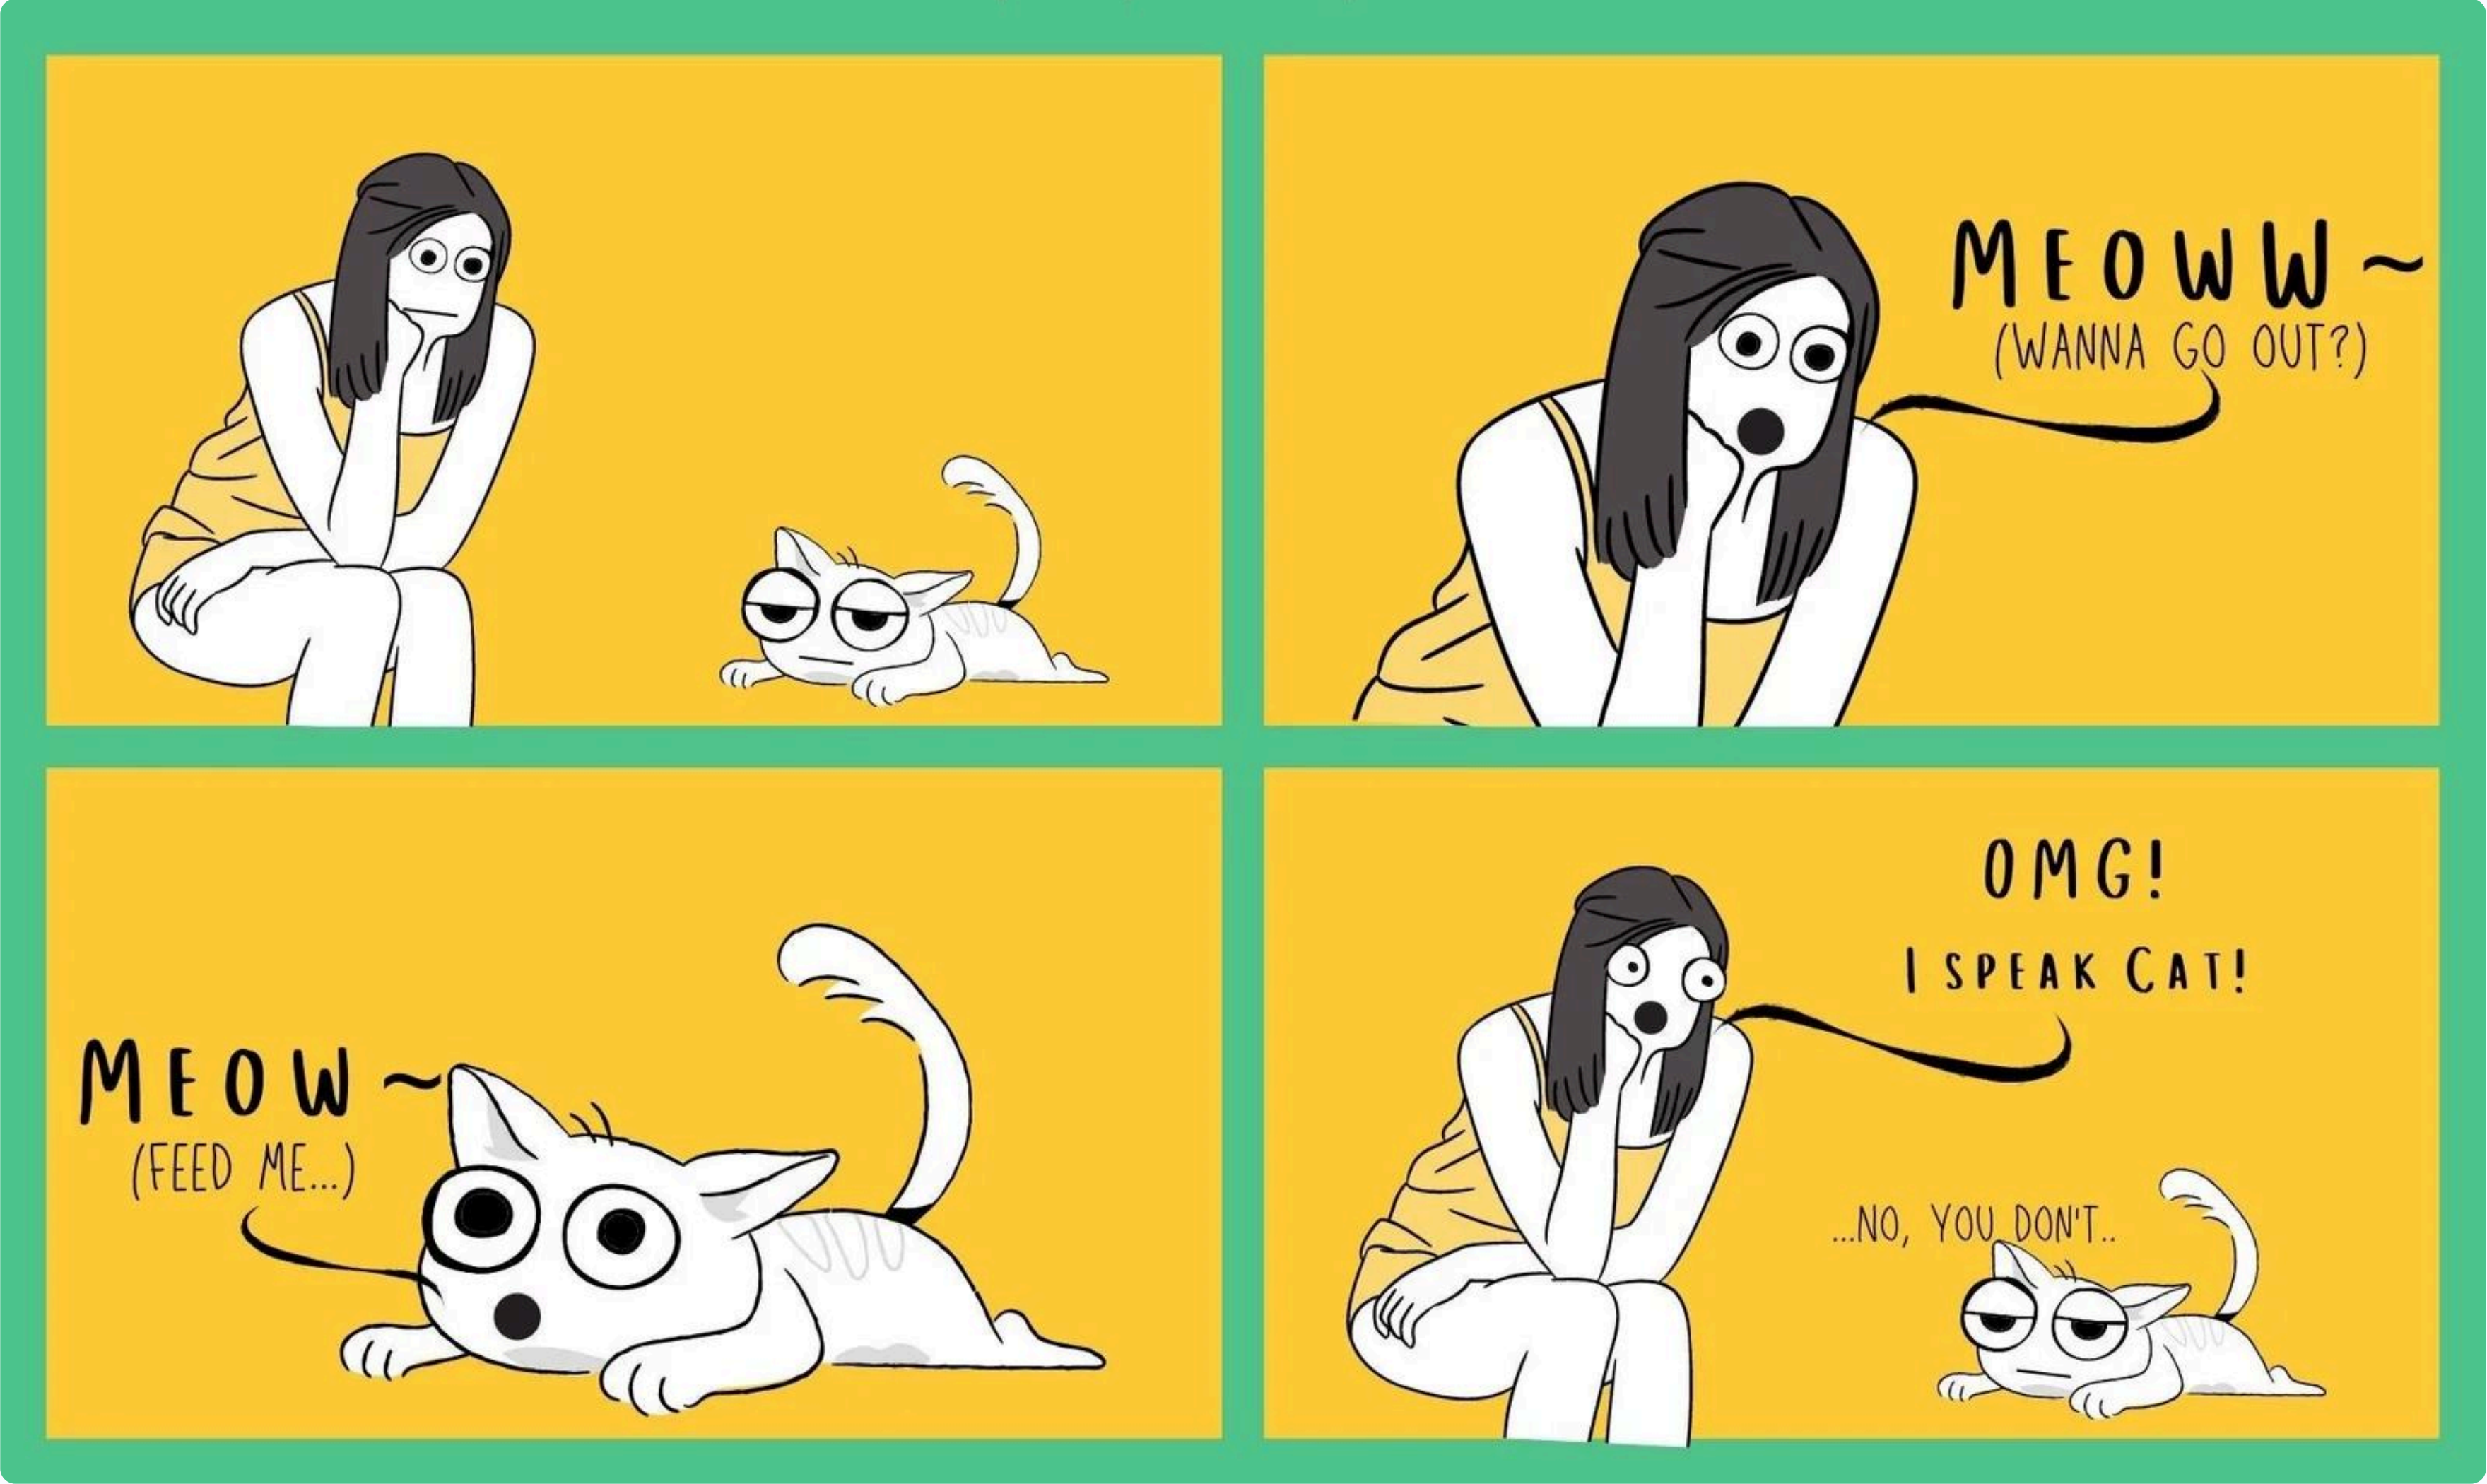

- **Configuration Manager (Only APM)**
- **Manage Reference designator Libraries**
- **Manage Template**
- **Manage Industrial Systems**

Applications Involved

Reference Designator

Reference Designators

They form the bases for the technical language, which will be followed by the entire organisation globally.

This ensures that all the stakeholders right from the engineers to contractors, interpret the project details consistently.

This streamlined communication helps in reducing misunderstanding and errors.

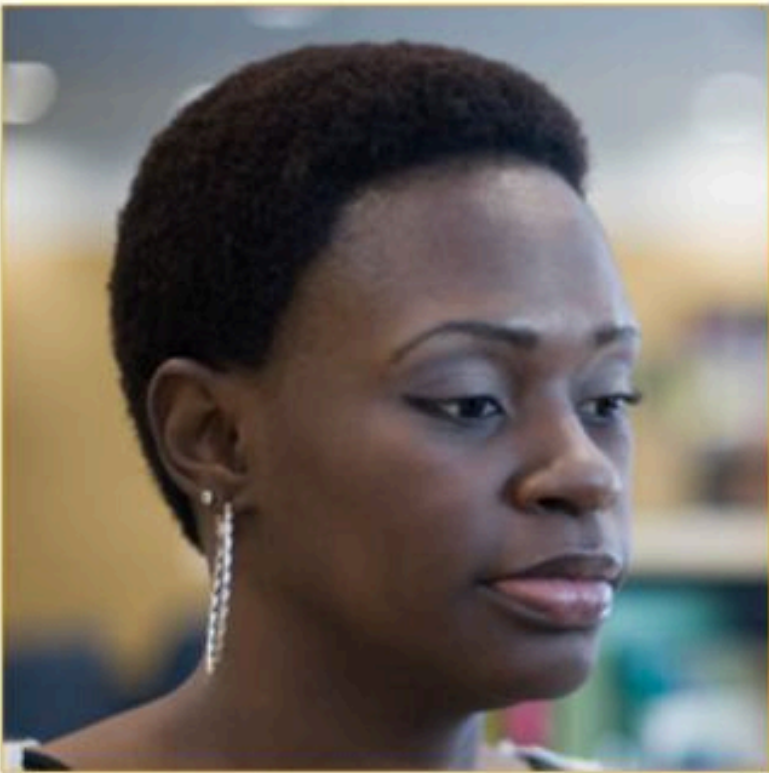

For System this language is taken from the **ISO 81346**

BUSINESS ROLE ID:
R0097-180

BUSINESS ROLE NAME:
MASTER DATA SPECIALIST –
MAINTENANCE
MANAGEMENT

Maintenance Master Data includes:

- Technical Objects (Equipment, Functional Locations, Bill of Materials (for Materials, Equipment, FLOCs), Measuring Points, Serial Numbers, Document Info Records)
- General Data (Codes/Groups, Classes, Characteristics, Class Assignments)
- Planning Objects and Information (Maintenance Plans & Items, Task Lists, Cycle Sets, Maintenance Strategies, Work Centers, Warranty Information, Document Info Records, Business Partners)
- Templates for Maintenance Plans, Measuring Points, TOs, Change Requests, etc.)

“I want to provide up-to-date, high quality master data to my colleagues.”

RITA

MAINTENANCE MASTER DATA SPECIALIST

MAIN GOALS

- Define and ensure high quality, consistent maintenance MD
- Ensure that maintenance master data supports business processes
- Efficient execution of data transactions
- Effective communication and feedback to data requesters

JOB RESPONSIBILITIES

Primary responsibilities

- Manages master data (i.e., creates, changes, deletes, assigns, etc.)
- Releases, and controls master data (locally / companywide) in various systems
- Performs mass changes on data
- Performs data quality checks
- Compiles reports on the quality / usage of master data
- Implements and ensures compliance with governance structures
- Executes changes in the change request process (MoC) for maintenance master data
- Provides end user support for master data related queries

Secondary responsibilities

- Involved in “business process change“ projects (e.g., migration, business acquisitions, etc.)
- Involved in definition and documentation of master data processes
- Involved in definition of Documentation standards
- Involved in definition of Data Model standards
- Involved in large projects (e.g., dismantling, removal, and reinstalling)
- Involved in end user training

NEEDS

- Central place/landing page to test, track, and review MD changes
- Easy way / system support to detect and manage duplicates
- Easy way to create Templates
- Easy way to create/copy MD/Objects based (via Templates/Copy & Paste)
- Easy way to recognize right inheritances
- Easy way to see impact of changes prior to making changes
- Easy way to distribute workload between team members in large projects
- Easy way to edit/map data model, get overview of the data model
- Easy way to identify incorrect data, based on certain criteria / rules
- Workflow/ process-based creation/editing (including externals)
- Ability to talk about / share possible improvements of master data and processes in mobile setting
- Reliable tool for mass changes
- KPI Reports for MD

PAIN POINTS

- Lacking system support/details to maintenance MD Lifecycle/status
- Lacking system support via templates for creating data objects
- Lacking data maintenance workflows (For create, release, change, etc. including external users)
- Finding and identifying correct data
- Difficult to detect and consolidate duplicates
- Difficult to track “movable” assets through maintenance processes
- Difficult to determine who owns which data
- No easy way to handle mass changes
- Lack of extensive system support for checking data formatting
- Difficult to import/export data (also en masse and with classification data)
- Lack of understanding and visibility for change impact
- Handling classification data
- Dispatching of work packages in large projects
- Tools and processes for change requests (MoC)
- Lack of KPI Reports for MD (e.g., quality, archiving, etc.)

Thank You
